Development Process

Before I begin I would like to thank you for giving this opportunity to me.

First of all, when I saw the task I was both exited an terrified. Because I have always been wanted to getting involved creating game like ‘Stardew Valley’. But I have not created a game like this before. So, I started seaching some assets from Unity Asset Store and bought one. Then I started creating my game. In order to creating a decent game inventory management system I also wanted to take a course from Udemy.

Game System:

Player has it’s own movement sicript. It controls taken input and animation. For simplicity , there is scriptable object for item list. So adding and removing item is easy. In the scene item prefabs are created and they get all the information about the item from ItemDetails[System.Serializable]. For the inventory management, SingletonMonobehaviour<InventoryManager> controls adding and removing item with the itemDetailsDictionary. Dictionary is created with itemCode key and ItemDetails value. So, it is also easy to access wanted item with it’s code. Moreover, System.Guid.NewGuid() is used for creating unique ID for all the data for saving system. Therefore we can change scene and when we come back it will be the same as we left. As I mentioned above I also used SingletonMonobehaviour to have steady objects for the game like Player, InventoryManager etc.

Codes that I wrote:

NPC.cs, NPCDetails.cs, NPCDescriptionAttiribute.cs, NPCTalkTrigger.cs, NPCcodeDescriptionDrawer.cs, UIShopSlot.cs, PlayerGoldDisplay.cs, Player.cs, FootSteps.cs, SoundEffectsManager.cs, SceneNPCManager.cs

Codes I got from course:

SingletonMonobehaviour.cs, Enums.cs, Tags.cs, SwitchBoundingShape.cs, Settings.cs, Fader_Item.cs, TriggerFade.cs, ItemDetails.cs, ItemList.cs, ItemPickUp.cs, ItemCodeDescriptionAttribute.cs, ItemCodeDescriptionDrawer.cs, ItemNudge.cs, InventoryItem.cs, UIInventorySlot.cs, UIInventoryBar.cs, Item.cs, UIInventoryTextBox.cs, EventHandler.cs, TimeManager.cs, GameClock.cs, SceneLoader.cs, SceneTeleport.cs, GenerateGUID.cs, ISavable.cs, SaveLoadManager.cs, SceneItemsManager.cs, InventoryManager.cs

Things I wanted to change in the game:

Optimizing sounds, more interaction for player (chopping, reaping etc.), since player did not have other outfits, I have created second costume and I would like to adjust it to be better, More scenes and more npc, better npc dialogues.
